

Residence Connect

Environmental Summary

How We Care

It's a primary concern of ours that we preserve and nurture the environment and our planet. As a global company, our impact on the environment is significant. Which is why we do everything in our power to create a sustainable, green business. Good environmental management is crucial to the continued success of Spacestor and is a concept that we encourage throughout our entire supply chain, as well as within the company itself. Through innovative research and development, we engineer sustainable solutions through clean and harmless processes. We seek to consistently support and strengthen the global community, help create a unique, unforgettable workspace experience and to inspire wellbeing.

Like our supply chain partners, we take our environmental responsibilities seriously; progressively studying and addressing factors such as waste management, the provenance of our timber and reducing the overall carbon footprint of our business. Minimising our environmental impact is a key consideration at every step of the way.

Residence Connect

Enter Residence Connect, the only video pod designed from the ground up with every detail created to optimise the sustained video call experience, for all staff. It's the result of a 2 year development journey with one of the world's leading global tech companies: audio and visual privacy, controllable light levels and ventilation, height-adjustable working position and working space all tested and honed to provide optimum user experience. Careful consideration has been given to service routing, maintenance and M&E needs with patented airflow technology, integrated service voids and removable access panels. Employee protection and sustainability is catered for with all materials being LBC Red List Compliant, no added formaldehyde and patented PVC-free acoustic seals. So there we have it. The Best Ever Video Conference Experience. For Everyone.

Environmental Information

% Material Type by Mass (kg)

Recycling Information*

The plywood frame, seat and table parts are recyclable.

Timber and board can be reused, recycled as Grade C wood or used as biomass waste in accordance with the biomass regulation. The metalwork is 100% recyclable through resmelting.

Camira Blazer fabric consists of 100% virgin wool. The production of virgin wool is generally considered to have a minimal environmental impact. Since wool is derived from animal fibres, it is an inherently sustainable fabric and highly biodegradable. The upholstery foam is made from 100% polyurethane foam which can be recycled and reused by grinding or particle bonding.

All packaging materials we use are fully recyclable. Our foam and polystyrene packing pieces are not currently recycled at kerbside but they can be recycled as LDPE.

*Please check with your local authorities for exact information on how to recycle these materials.

Materials		% Material Type by Mass (kg)*
Frame	Timber and Board	52%
	Lacquered birch plywood (approx 95% plywood, 5% glue & lacquer)	
	Metals	18%
Glass panels	Acoustic laminated glass with PVB interlayer	8%
Upholstery	Upholstery Fabric (<i>such as Camira Blazer - 100% virgin wool</i>)	19%
	Polyurethane foams	
Fixings & other parts	Polymers and Rubber	1.5%
	Electricals	1.5%
Packaging		0.5%

*the above information is representative of the entire Residence Connect range to a minimum of 99% disclosed to 100ppm

The addition of accessories will contribute to material content, however this is dependent on the designer's choice.

94%
recyclability by mass (kg)

42%
recycled content by mass (kg)

Recyclability (%)

Timber and Board**	100%	Foams**	100%
Steel	100%	Rubber	25%
Glass panels	90%	Other Polymers	20%
Metals	100%	Packaging*	100%

*item can be recycled at kerbside.

**if unable to be reused this material can be incinerated to generate energy through biomass disposal.

Residence Connect Spacestor

Final Assembly: Hemel Hempstead, UK; Los Angeles, California, USA; Philadelphia, Pennsylvania, USA
Life Expectancy: 20 Year(s)
End of Life Options: Biodegradable/Compostable (2.0%), Recyclable (95.9%)

Ingredients:

Wood; Polyethylene Terephthalate; 1-Propene, polymer with ethene; Iron; Nickel (Metallic); Polyurethane foams; **Phenol, polymer with formaldehyde**¹; Small Electrical Components-RoHS Compliant²; Chromium, metallic; Polymethylene polyphenyl isocyanate; Manganese; Aluminum; Dicumylperoxide; Acrylonitrile-Butadiene-Styrene Copolymer; Silicon; Paraffin; Molybdenum; Polypropylene; Bicyclo[2.2.1]hept-2-ene, 5-ethylidene-, polymer with ethene and 1-propene; 2-Propenenitrile, polymer with 1,3-butadiene; Calcium carbonate; Carbon black; Titanium dioxide; Copper; Cobalt metal powder; Titanium

¹LBC Temp Exception RL-009 - Formaldehyde

²LBC Temp Exception RL-002 - Small Electrical Components

Living Building Challenge Criteria:

I-13 Red List:

- LBC Red List Free % Disclosed: 100% at 100ppm
- LBC Red List Approved VOC Content: Not Applicable
- Declared

I-10 Interior Performance: Not Compliant

I-14 Responsible Sourcing: Product Available with FSC Chain of Custody

SPC-0005
 EXP. 01 DEC 2022
 Original Issue Date: 2021

Additional Information

Dedicated manufacturing facilities in the UK and USA provide you with ultimate flexibility in product customization and lead time. Spacestor is ISO9001, ISO14001, FISP, FSC and CHAS accredited - demonstrating our commitment to quality, safety and sustainability.

All materials are locally sourced as much as possible from suppliers who meet high environmental standards.

The majority of our board components meet the emissions limit values of the European formaldehyde class E1 under ECHA (European Chemicals Agency), which means board materials contain a maximum of 0.007% formaldehyde. Our board suppliers have the VOCs in their products tested regularly according to exceed the latest standards. Melamine resin surfaces, laminates and most coatings block emissions from the coreboard. The emissions of these coatings are very low, so overall, the laminated board exhibits far lower values for VOC and formaldehyde emissions than the rawboard. We are now able to offer some products with zero added formaldehyde, and are moving to increase this steadily.

Waste management is under continual reduction and measures are taken to reduce landfill. All waste that can't be used anywhere else is recycled and managed in accordance with legal requirements. And it's not just the waste we produce on site that's recycled; when an installation is complete, all waste and packaging materials removed are returned to be fed into our segregated waste streams.

Our wood waste never goes to landfill. Instead, we burn all our biomass-type waste in our on-site 350kW Ranheat biomass boiler which in turn, provides enough energy to heat our main manufacturing plant and provide hot water for all on-site facilities, eliminating tonnes of CO2 emissions from fossil energy sources, as compared to energy generation using natural gas. Since expanding the capacity of our biomass power plant in 2016, we can proudly say we have not had to purchase gas from the UK network.

Distribution generally occurs between the manufacturing site to the client. Wherever possible, we minimize packaging weight and volume to reduce the carbon footprint of the product during distribution.

Spacestor is dedicated to product longevity. Residence Connect is made with replaceable parts and easily changeable accessories. The product is 94% recyclable by mass (kg) and easy to disassemble at the end of life using simple tools.

Product Lifecycle

The background consists of numerous horizontal bands of varying widths and colors, including shades of blue, orange, red, yellow, pink, and grey. The colors transition from dark blue at the top to light blue at the bottom, with various shades of orange and red in the middle. The bands are not perfectly uniform, creating a textured, layered effect.
